

Regarding on roll bars

FORMULA DRIFT
J A P A N

In 2018 including the main hoop, use of 40mm 2mm thick was approved. (However, it may be 45 pie in 2019)

The gray part(Main Roll bar) of the illustration(J-2/J-3/J-4) must use 44.45mm x 2.5mm or 50mm x 2.0mm.

Regarding the above-mentioned vehicle regulation, there is a strong demand to alleviate to 40 mm in 2018, and as a result of repeated consultations with the vehicle regulatory committees of the USA FORMULA DRIFT, it was decided to be ease.

There is no structural mitigation, but with the above structure, we were able to admit the use of 40mm x 2 mm thick pipe including main hoop also in 2018.

From 2019 it is possible that a roll cage based on FIA may be necessary, so please prepare for understanding and preparation for 2019 from now.

We are deeply grateful to those who already made it with 45mm. Since the main hoop of 45mm will become essential from 2019, thank you for being able to cooperate earlier, that it was produced according to the original vehicle regulation.

Vehicle regulation is a rule set to be safer for everyone, but we would like to make the drift industry excitement, we want to minimize the burden of everyone, we think with various ideas with various aspects We are making adjustments.

We sincerely hope to cooperate with your understanding as we would like to make better competitions reflecting the opinions of everyone. We are waiting for everyone's participation.

Caution point

Always place a radiator and oil cooler in the main frame. If it does not fit, you can not participate.
